

Mud Tank

A mud tank is a big storage container applied to hold reserves of drilling fluid, also known as drilling mud, for a [drill rig](#). Drilling fluid is applied to decrease friction on drill components to allow them to work harder and faster with less risk of breaking down. We manufacture and refurbish mud tanks of various shapes and sizes for industrial use, and customer who specialize in cleaning tanks and other drilling equipment are also available. The cost for tanks and associated services varies widely, especially when custom designs are involved.

General Features

NG series Mud Tanks are overall designed which is easy to transport. Coated with high quality anti-corrosion painting. Suitable for onshore or offshore drilling operations.

Details

The NG series mud tanks were developed to provide the market with more reliable technology and more hoisting performance. Fully customer designed capacity and type. Featured with high quality anti-corrosion proof and easy to transport. Included but not limited by the advantages mentioned, NG series mud tanks might be your best choice.

General Features

- Suitable for cold area and desert environment
- Suitable for onshore or offshore rigs
- Skid mounted, trailer mounted for selection
- High quality anti-corrosion proof painting

Main Parameters

Capacity: Customer designed

Parameters:

Mud Tanks are fully customer designed, depends on different usage like: Storage Tank, Mixing Tank, Mud Trip Tank or Recycling Tank.
